ARYAN PANDITA

Blockchain Developer

aryanpandita003@gmail.com +916005179415 github.com/Aryan8899 linkedin.com/in/aryan

SUMMARY

Blockchain Developer with **2+ years** of experience designing and building decentralized applications and deploying smart contracts across Ethereum, BSC, and custom L2 networks. Proficient in end-to-end development, with strong expertise in both backend systems and intuitive frontend interfaces. Experienced in developing DeFi protocols, DEXs, cross-chain bridges, and blockchain explorers. Committed to writing secure, scalable, and high-performance code with a strong focus on gas optimization.

PROFESSIONAL EXPERIENCE

Tarality

06/2025 – Present | Noida, India

Blockchain Developer

- Built a leverage trading system with up to **10x leverage** — executed liquidation engine, collateral management, and Chainlink oracle integration for real-time price feeds.
- Architected and deployed a Blockchain Explorer for the Nowa Network (custom L2 chain) using Blockscout, enabling real-time indexing of blocks, transactions, and wallet activity.
- Built a cross-chain bridge using LayerZero protocol and contributed to a DEX with AMM logic, liquidity pools, and yield farming — enabling users to earn rewards on deposited liquidity.
- Reduced gas costs by **~30%** through eliminating redundant storage writes and restructuring loop logic in core ERC-20 contracts.

Stack Meridian

12/2024 – 05/2025 | Remote

Full Stack Blockchain Developer

- Deployed and maintained Solidity smart contracts on Ethereum and Binance Smart Chain for multiple client projects.
- Integrated blockchain functionality into frontend applications using Hardhat, Ethers.js, and Web3.js.
- Built high-performance user interfaces using React, Vite, and TypeScript with seamless on-chain interaction.
- engineered wallet authentication and transaction flows for decentralized applications using MetaMask and WalletConnect.
- Built decentralized applications (dApps) with end-to-end smart contract interaction and real-time on-chain data.

PM Interview Prep Club

09/2024 – 12/2024 | Remote

Full Stack Developer

- Developed **15+** reusable UI components using React and Tailwind CSS including timers, question cards, and progress trackers used across the platform's core interview flow.
- Executed mock interview flows, timers, and question tracking system used by active platform users.
- Built RESTful APIs using Node.js and Express.js for authentication, data handling, and scoring logic.
- Collaborated closely with frontend and backend teams to improve overall user experience.

AD99 India

01/2024 – 08/2024 | Noida, India

Full Stack Blockchain Developer

- Built and enhanced blockchain-based web applications using React, Node.js, MongoDB, and Solidity across Ethereum, BSC, and other EVM-compatible networks.
- Managed both frontend and backend development lifecycle ensuring performance, stability, and on-time delivery.
- Deployed applications on cloud platforms including AWS, Render, and Vultr.
- Optimized APIs and database queries to improve backend responsiveness and reduce latency.

PROJECT EXPERIENCE

Nowa Finance Blockchain Explorer —explorer.nowa.finance

- Architected and deployed a fully functional blockchain explorer for the Nowa Network (custom L2 chain) using Blockscout, enabling real-time indexing of blocks, transactions, token balances, and wallet activity.
- Configured custom network parameters, RPC endpoints, and indexer pipelines to support the Nowa L2 chain's unique architecture.

Cross-Chain Bridge — LayerZero

- Built a cross-chain bridge usingLayerZero protocol enabling secure, trustless asset transfers across EVM-compatible networks.
- applied smart contract logic for locking, minting, and burning tokens across source and destination chains.

Leverage Trading System

- Created and implemented an on-chain leverage tradingprotocol allowing users to open long/short positions with up to 10xleverage.
- Built liquidation engine,collateral vault, and blended Chainlink price feeds for real-time mark price and position health monitoring.

SuiDex—DecentralizedExchangeonSui —dex.suidex.org

- delivered the integration of SuiDex, a DEX built onthe Sui blockchain with an established user base, handling smart contract interaction and frontend connectivity.
- Implemented liquidity pool and yield farming modules —enabling users to provide liquidity, earn LP tokens, and participate in farming rewards with real-time APY tracking.
- Worked with Sui's Move-based contract architecture and integrated wallet connectivity for seamless on-chain trading and liquidity management.

ICO Smart Contract — BSC Mainnet —bsc contract

- Engineered and designed a custom ICO smart contract on the Binance Smart Chain mainnet for secure token sales and investor vesting.

Multisignature Wallet

- Designed and contributed to the development of a multi-signature wallet solution enhancing on-chain governance and fund security for DAOs and private organizations.

SKILLS & Certification

Languages: C++, Python, JavaScript, Solidity
Web Development: HTML, CSS, React.js, Tailwind CSS, Next.js
Frameworks & Tools: Hardhat, Truffle, GitHub, ClickUp
Databases: MySQL, MongoDB, PostgreSQL
Other Technologies: Vite, Three.js, Visual Studio, Eclipse
Certification : Blockchain basics , Ethereum and solidity: the Complete Guide, Capstone Project- Professional Certificate

EDUCATION

B.Tech in Computer Science

2021 – 2025 | Pune, India

VIIT Pune CGPA: 9.0

Achievement

- Ranked **#10** in DAPP competition at Dapp World out of hundreds of participants.
- Shortlisted in **Top20** candidates at DevFest Noida for AI-focused development challenge.
